## Report To The

# Secretary of Health and Human Resources, The Honorable Jane H. Woods 

and the

General Assembly of Virginia

# REVIEW of <br> CHILD SUPPORT GUIDELINE §§ 20-108.1 \& 20-108.2 

Secretary's Triennial Child Support Guideline Review Panel Joseph S. Crane, Chair

October 31, 2002

# Secretary of Health and Human Resources' CHILD SUPPORT GUIDELINE REVIEW PANEL 730 East Broad Street - MSU - 4th Floor Richmond, Virginia 23219 

October 31, 2002

TO: The Honorable Jane H. Woods
Secretary of Health and Human Resources, and
Members of the Virginia General Assembly
FROM: Joseph S. Crane Joseph S. Crane
Chairman, Secretary's Triennial Child Support Guideline Review Panel

## SUBJECT: Transmittal of Panel Report

Federal regulations and the Code of Virginia require a periodic review of the Commonwealth's Guideline for determining the parental financial support obligations, whether determined judicially or administratively, in child support cases, with recommendations to the Secretary and the General Assembly for consideration in the next following Assembly session. I am hereby respectfully submitting the final report of the review for $2001-2002$.

The Guideline is contained in Code $\S \S 20-108.1$ and .2. The requirement for periodic review (triennial in Virginia) is in $\S 20-108.2 \mathrm{H}$. That section also specifies that the review panel is to include a representative each of a juvenile and domestic relations court and a circuit court, a representative of the executive branch, a member each of the House and Senate, members of the bar, two each custodial and non-custodial parents, and a child advocate. The two General Assembly members are to be appointed by the Chairs of the respective House and Senate Courts of Justice Committees. All other panel members are to be appointed by the Secretary of Health and Human Resources.

In the triennial year 2001, completion of the appointment process occupied more time than anticipated, such that there remained opportunity to hold only a single Panel meeting in that year. An interim report was rendered on October 31, 2001, with the specification that the substantive review would be completed during 2002, including additional recommendations for consideration by the Secretary and the General Assembly relative to the 2003 Assembly Session. There are no budget implications in adoption of these recommendations.

That review has been completed, with the outcome including a number of important recommendations, most requiring legislative action. Probably the most
important recommendation is the enactment of a new Guideline Schedule (providing the presumptive amounts of child support to be awarded in various combinations of total parental income and the number of children in the case). This Schedule, developed under the Panel's direction by an economist of the College of William and Mary in accordance with recommendations of the Joint Legislative Audit Review Commission, will if approved constitute the first update of the Schedule since 1988, and will both bring support awards into better alignment with child raising costs and protect the ability of low-income noncustodial parents to support themselves.

On behalf of the Panel members, thank you for the opportunity to serve.

Enclosure: Panel Report
c: Maurice A. Jones, Commissioner of Social Services
Nathaniel L. Young, Jr., Deputy Commissioner
and Director, Child Support Enforcement
Panel Members

# REVIEW of <br> CHILD SUPPORT GUIDELINE §§ 20-108.1 \& 20-108.2 

Secretary's Triennial Child Support Guideline Review Panel Joseph S. Crane, Chair

October 31, 2002

## EXECUTIVE SUMMARY

## VIRGINIA'S CHILD SUPPORT GUIDELINE REPORT

## October 31, 2002

## The Requirement for this Report

Title IV-D of the federal Social Security Act established the Child Support Enforcement program in 1975, with substantial modifications over the years following. The program, though state-administered, is heavily regulated and largely financed by the federal government, using little or no Virginia General Funds.

One of the federal requirements is that states utilize "guidelines" to set the criteria for determination of parental obligations to provide financial support for their child(ren) when their cases come before either a court or an administrative child support enforcement office. In Virginia, these guidelines are in Code $\S 20-108.2 \mathrm{H}$, with the specific obligation criteria located in $\S \S 20-108.1$ and 20-108.2.

The federal government requires that states conduct substantive reviews of, and make appropriate adjustments in, their respective guidelines on at least a quadrennial basis. Virginia law, in the Code sections just cited, requires such a review triennially, to be conducted by a Panel with membership including specified interest groups. Except for one member each from the Virginia House and Senate, appointed by the Chairs of their respective Courts of Justice Committees, Panel members are appointed by, and report to, the Secretary of Health and Human Resources.

The last previous Panel was appointed late in 1998, and because of that lateness made an interim report that year, completing its deliberations and rendering its final report in October 1999. With 2001 being the actual triennial year, the appointment process again was completed too late to allow completion of substantive review in the triennial year. An interim report was rendered in October 2001, and the review continued into 2002. The document now before the reader is the result of that review.

## Some Background Information

The cited Code sections include a Schedule of presumed total financial support award amounts for the possible combinations of total parental gross income and number of covered children, and legislative prescriptions for the Schedule's use by both the courts and the Division of Child Support Enforcement (DCSE). The prescriptions include definitions of deviation factors by which courts or DCSE may adjust Schedule amounts when warranted in particular cases. In practice, DCSE offices are authorized limited discretion to deviate from the Schedule when they are the ones who set the child support obligations, whereas the courts may apply all of them.

Virginia is one of the more than three-fourths of states utilizing variants of the "Income Shares" method of determining child support obligations. Several additional states that have used other methods have also determined, or are considering, to convert to Income Shares (e.g., Minnesota and Wisconsin). Under this approach, the combined gross income of the parents is used, along with the number of children to be supported, to calculate the presumed child support obligation. That obligation is then pro-rated between the parents according to their proportion of the total income.

The Commonwealth's present Schedule was enacted in 1988, utilizing data and research findings from a decade or more earlier. Data for determining obligation amounts is based on national studies of the costs of raising children in intact families, with the underlying philosophy that to the maximum possible extent, the child(ren) affected by the dissolution of whatever relationship gave them life, should continue to be maintained insofar as possible at the same standard of living they would have enjoyed if the family were intact.

A number of groups and individuals representing the interests of non-custodial parents (NCPs) oppose the income shares approach. Among other concerns, they maintain that basing child support on data for intact families discriminates against NCPs and ignores the additional costs of their having to maintain separate households and support the costs of such part-time custody and visitation that they may have. While continuing to support income shares, the Panel has attempted to offset the additional household and custody/visitation costs in its proposed new Schedule, in addition to increasing the accommodation for self-support of lower income NCPs above the present Schedule.

## Data and Methodology Issues

The present Panel, and its two predecessors, have struggled with the fact that the data available for computation of child support obligations is based on intact families, interpolated to apply to the separate households in the child support enforcement caseload. The data are also national rather than Virginia-specific. The 1999 Panel report recommended that the General Assembly authorize and fund a Virginia-specific study of the cost of raising children in non-intact families.

Senate Joint Resolution 192 of the 2000 General Assembly Session directed the Joint Legislative Audit and Review Commission (JLARC) to examine "the costs of raising children in Virginia when parents live in separate households," and to "develop data that can [be] used to determine appropriate child support amounts." In Senate Document 9, its Technical Report: The Costs of Raising Children, dated November 7, 2000, JLARC concluded that "it would not be cost-effective for the General Assembly to attempt a new, Virginia-specific data collection effort."

The JLARC report provided a methodology for using current nationwide data to estimate expenditures on children, and to help evaluate present Guidelines or develop new ones. Its recommendations, which the current Panel adopted and used, were to
continue the use of the income shares approach; to continue the use of data on husbandwife households as the most comprehensive and accurate available; and to utilize a number of technical estimating models for estimating expenditures on children.

## Philosophy/Public Policy Issues

There is a perhaps-inescapable tension between the perspectives of custodial and non-custodial parents. Although child support enforcement does not include the determination of custody, visitation or other aspects of the dissolution of the relationship that ensued in one or more children, it gets caught up in the aftermath of such determinations.

The Panel struggled with these conflicting outlooks and interests. While proponents on either side often see issues with few gray tones, the child support enforcement mission must focus on the children, and what, in an imperfect world with finite resources, incomplete information and huge caseloads, are the best available decisions to protect their interests.

## Synopsis of the Panel's Legislative Recommendations

1. That the General Assembly approve and adopt a newly developed-for-Virginia, income shares based Schedule of Monthly Child Support Obligations and that with adoption, legislative language be included stating that the new Schedule shall be implemented prospectively, and that, for purposes of review or modification, implementation of the new Schedule shall not be considered, of itself, a material change of circumstances. [At the Panel's direction, the new Schedule reflects a discount for the separate or second household.]
2. That $\S 20-108.1(\mathrm{~B})$ be amended:
(B)(3) [Clarification of criteria for imputation of income to either parent]
(B)(19) [Clarification of criteria for inclusion or exclusion of income from overtime or a second job in determining the child support obligation]

3 That the following language be inserted in § 20-108.2(A) to accompany the new Schedule as an aid to understanding it:

This Schedule is based upon the rationale that there are fixed housing and utility costs, variable transportation costs, and the assumption of 'exercised' visitation by the noncustodial parent to be between 60 to 90 days annually.
4. That the Schedule parameters or key assumptions be inserted as the opening statements in § 20-108.2(A). [itemized in main body of this report]
5. That §20-108.2(C) be amended to address a self-support reserve.
[Updating the criteria for a self-support reserve to accord with present federal poverty level
6. That § 20-108.2 (C) be amended:
[Refining the definition of "gross income"]
7. That $\S 20-108.2(\mathrm{D})$ be amended:
[Amplifying what is covered among uninsured medical and dental expenses in excess of $\$ 250 /$ year/child. If the proposed Schedule is not adopted, the dollar amount above will need to be reduced to $\$ 100$.]
8. That Section 20-108.2(F) be amended:
[Clarifying the rules on treatment of child care costs]

## The Panel's Non-Legislative Recommendations

9. That the Secretary direct the Department of Social Services to produce and distribute a video recording explaining Virginia's child support Guideline, and that this recording be distributed to each court and child support office in the Commonwealth. The intent of the video is to explain Virginia's child support guideline to all parties, including the statutory deviations for the Schedule. [Note: the DCSE of the Department of Social Services has agreed to pursue this recommendation.]
10. That the Secretary encourage the Executive Secretary of the Supreme Court of Virginia to provide continuing education to courts relative to specific child support issues, including application of the child support Guideline, the various tax consequences, deviation factors, and other relevant aspects.
11. That the Department of Social Services study the feasibility of changing its automated child support case management system, and of seeking legislation to allow for the inclusion of all deviations to insure consistency of the automated monthly guideline calculation used by the courts and the administrative agency.
12. That the remaining "issues" not addressed by this Panel, with copies of all minutes of the Panel's meetings be provided to the next Panel. Two issues remained: 1) Minimum order (\$65) for Court-ordered child support for unemployed NCPs; and 2) The means of identifying the support, e.g. food, shelter, transportation, etc.

## VIRGINIA'S CHILD SUPPORT GUIDELINE REVIEW REPORT

October 31, 2002

This report sets forth the Secretary's Child Support Guideline Review Panel's (Panel) recommendations on Virginia's child support Guideline. The Panel recognizes the impact of the Guideline on the lives of children and their parents, and the need for ongoing, regular review of the social and economic research in this critical area. The issues and questions presented to the Panel in writing and at the public hearing, along with the Panel's own deliberations, identify many important but complex issues related to the child support Guideline and the ways by which children, custodial and noncustodial parents are affected by it.

The Panel's legislative recommendations are to amend §§ 20-108.1 and 20-108.2, which comprise Virginia's child support Guideline. The child support Guideline (Guideline) and Schedule of Monthly Basic Child Support of Obligations (Schedule), deviations and definitions, affect a substantial number of Virginia's citizens. It has been said that producing a child support guideline that is satisfactory to all is impossible. However, every effort has been made to ensure that all but the most exceptional child support situations can relate to the proposed recommendations. These recommendations, when implemented by the General Assembly, represent a significant improvement in efforts to establish or modify appropriate child support obligation amounts based upon the most recent data available.

These recommendations support public policy that rearing a child with both parents involved maximizes the opportunities for the child. The Panel recommends that the Secretary seek and the General Assembly adopt these recommendations, ensuring more positive and equitable treatment for Virginia's children and their parent's in the determination of child support obligation amounts.

We recognize that these recommendations and the proposed legislative language shall be more appropriately drafted by the Division of Legislative Services to ensure consistency and accuracy with the Code of Virginia, as well as with legislative protocol and nomenclature.

## PANEL'S AUTHORITY AND CHARTER

Pursuant to § 20-108.2H and as required by federal regulation, the Commonwealth's Secretary of Health and Human Resources appointed a Child Support Guideline Review Panel between April and August, 2001, with the assignment of reviewing Virginia's child support Guideline as set forth in the Code of Virginia, §§ 20-108.1 and 20-108.2.

The child support Guideline was established to provide those who determine or approve child support obligations, including the courts, attorneys, mediators and staff of the Division of Child Support Enforcement (DCSE) within the Department of Social Services (Department), with a uniform, objective and economically-based method of establishing fair, adequate and consistent child support obligations throughout Virginia.

## PANEL COMPOSITION.

The Panel membership complies with federal and state statutory requirements that the review organization include representation of the General Assembly, courts, the executive branch, the bar, two each custodial and noncustodial parents, and child advocates. The Panel members representing the General Assembly were appointed by the respective chairmen of the House and Senate Courts of Justice committees. All other members were appointed by then Secretaries of Health and Human Resources Claude A. Allen and Louis F. Rossiter. The members and the interests they represent are:

| 1 | Ms. Amy Atkinson, Child Advocate | 8 | Ms. Stephanie Sulmer, Custodial Parent |
| :--- | :--- | :--- | :--- |
| 2 | Ms. Cathy Burch, Custodial Parent | 9 | Senator Frederick Quayle, Senate |
| 3 | Anne Brakke Campfield, Esq., Bar | 10 | Delegate Vivian Watts, House of Delegates |
| 4 | Mr. Maxie Cannon, Noncustodial Parent | 11 | Judge Patricia West, Circuit Courts |
| 5 | Lawrence D. Diehl, Esq., Bar | 12 | Judge A. Ellen White, J \& DR Courts |
| 6 | Cynthia L. Ewing, Esq., Bar | 13 | Mr. Joseph S. Crane, Chairman |
| 7 | Mr. Murray Steinberg, Noncustodial parent |  | Executive Branch |

## THE REVIEW PROCESS.

The current Guideline was last reviewed in 1998-1999 with recommendations for the 2000 Virginia General Assembly. That General Assembly took no action on most Panel recommendations. The General Assembly did charge the Joint Legislative Audit and Review Commission (JLARC) to "examine the 'costs of raising children in Virginia when parents live in separate households' and to 'develop data that can [be] used to determine appropriate child support amounts.'" The results of that charge are contained in Senate Document 9 (2001) entitled JLARC's Technical Report: The Cost of Raising Children (JLARC Report), issued on November 7, 2000.

The present Panel began its deliberations in September, 2001, submitting a brief report to the Secretary and to the General Assembly on October 31, 2001. That report incorporated two recommendations from the 1998-1999 Guideline Review Panel Report. One of the recommendations addressing FICA payments by self-employed was enacted by the General Assembly. The second recommendation is again included in this report. This Panel continued the review of the Guideline and related child support issues through October, 2002.

The Panel received written public comments from November 1, 2001 through March 1, 2002. The Panel later extended this period through May 1, 2002, and then continued to receive comments on child support guideline matters throughout the entire period of its deliberations.

Extensive written comments and suggestions relative to changes to the Guideline were received from citizens from across the Commonwealth, as well as from some interested parties throughout the United States. On March 20, 2002, a public hearing was held in the General Assembly building. All persons who requested time to be heard were noncustodial parents, and each was able to address the panel with his/her concerns.

The Panel asked that one or more Virginia economists and Georgia economist Mark Rogers, who has testified before several other states' guideline review panels, be invited to address the Panel. The economists were asked to study Virginia's current Guideline and address the Panel at its May, 2002 meeting, as to their opinions of the adequacy of the Guideline. The Panel also requested a presentation from Mr. Robert Raymond, a Richmond Certified Public Accountant, on tax consequences related to child support. Mr. Mark Rogers, Dr. John Knapp of the University of Virginia, and Dr. William Rodgers of the College of William and Mary subsequently made presentations to the Panel.

Mr. Raymond presented to the Panel at its June 4, 2002 and July 1, 2002 meetings. In the latter meeting, he distributed copies of a chart he had prepared showing tax consequences of the four federal tax features that the Panel asked him to examine. Lengthy discussion followed this presentation, with varying points of view espoused by different panel members. The Panel was concerned about the reported inconsistency among the courts and their providing or not providing deviations for tax consequences on court-ordered child support obligations.

Senior Assistant Attorney General Craig Burshem indicated in a letter to Mr. Crane that there was no requirement for or prohibition against counting tax benefits received by a custodial parent as income for purposes of calculating child support obligation amounts. One judge and at least one attorney on the Panel, as well as Mr. Raymond, all said they have direct knowledge of a number of courts that are currently counting some tax benefits as income.

Dr. William Rodgers, the Francis and Edwin L. Cummings Associate Professor of Economics at The College of William and Mary, was requested by the Panel to develop a new Schedule by the Panel's August 19, 2002 meeting, using the JLARC report as a guide. In subsequent discussions with Dr. Rodgers, the Panel members asked that he develop and provide for their consideration several different versions of his Schedule.

## DEVELOPING THE NEW VIRGINIA SCHEDULE

## Income Shares Model

The income shares-produced schedule, in use by Virginia and approximately 35 other states and territories, is predicated on the concept that the child should receive support in the same proportion of parental income that he or she would have received if the parents lived together.

Each state using an income shares child support guideline model has adapted it to meet its own criteria. Other child support guideline models currently in use in the United States include the Delaware Melson formula (three states), similar in principal to the income shares model, and the Percentage of Obligor Income Standard (17 states). It should be noted that in at least two states, Georgia and Minnesota, the courts have found the Percentage of Obligor Income Standard to be unconstitutional, inasmuch as it considers only the income of the noncustodial parent (NCP or obligor.) We understand both Georgia and Minnesota, as well as Wisconsin; have now adopted the income shares model for their guideline Schedule. Other states using the Percent of Obligor Income approach are closely reviewing their own model.

The basic economic data used in the income shares model, including the costs of raising a child or children, are derived from overall expenditures in "intact" families. There are no valid data currently available which address the cost of raising a child(ren) where parents are in separate households (and, as affirmed in the JLARC Report, the cost of producing such data would be prohibitive.) The absence of such data, essential to realistic determination of child
support, is the principal reason for the use of expenditures on children in intact families in the income shares models in a majority of states. While many, if not most, members of the Panel have concerns about the absence of data on non-intact families, the overwhelming majority see no preferable alternate approach as being available, now or for the foreseeable future.

The JLARC Report, while recommending continued use of income shares and acknowledging the limitations on direct data regarding non-intact families, made a number of technical recommendations to guide economists in developing a new schedule to replace the existing model developed in 1986/1987.

## Data Availability, Cost of Raising Children

In the 1998-1999 Guideline Panel report, there was considerable concern that data available were national only, and as applicable to the costs of raising children, were based on two-parent or intact family groups. The Panel recommended that the Assembly charter and fund a Virginia-specific study of the costs of raising children in non-intact families. Because of prohibitive costs of such a study, the Assembly instead directed JLARC to study the subject, which ensued in the Special Report cited above.

For this 2001-2002 Panel, the JLARC Report and recommendations, which were based upon data from the United States Department of Agriculture's (USDA) 1997-98 Consumer Expenditure Survey, have been carefully followed. Dr. William Rodgers has used those recommendations and the 2001 USDA Consumer Expenditures Survey along with the Panel's specific directives. (For more information on Dr. Rodgers' approach, please see Exhibit B.) The Panel notes the current Schedule is based on data from the early 1970s.

Data availability accordingly requires the economist to take measures to ensure that as combined parental income figures increase in the schedule, the increments of change in support levels progress in a logical progression. Dr. Rodgers has done this by selecting a number of "key" income levels for application of the economic formula derived from the child raising expense components. Between these key income levels (established at combined parental
monthly gross incomes of $\$ 3,550, \$ 4,550$, and $\$ 8,500$ ), he has then tempered the formula data to assure a reasonable progression of support levels, and to reflect the Panel's awareness that there are some duplicated costs when the noncustodial parent exercises visitation with the child/ren, causing a shifting of some costs. This process has been followed for various numbers of children in particular child support cases.

Not surprisingly given the many years since the existing Schedule was developed, Dr. Rodgers found that expenditures relevant to raising children are substantially higher than those reflected in the current Schedule. Citing just one example, the current Schedule for combined parental gross monthly income of $\$ 3,550$ with one child, calls for support equaling $14 \%$ of that income. For the same support requirements, the more recent consumer expenditure data at that income level would call for $24 \%$ of income, a difference amounting to an extra $10 \%$ of parental income. The equivalent differences for the other key income levels would be different percentages but similarly large increases.

The Panel and Dr. Rodgers recognize the very substantial impact that such increases would have, particularly if applied to all existing child support cases. They also recognize that the available data do not take into account either the fact of there now being two separate households, or the costs to the noncustodial parent relative to visitation with or part-time custody of his/her child(ren).

Further, it appears from the data that the costs of raising children, based on the assumptions and thirty year-old expenditure information comprising the current schedule, have resulted in underestimating these costs in intact families. The JLARC study and the use of current expenditure data by Dr. Rodgers appear to indicate that the cost of raising children in an intact family have been underestimated over the years, based upon the data available in the early 1970's.

The Panel notes Dr. Rodgers' report addresses, between the current versus the proposed schedules, the changes in percentages of combined gross monthly income required for a given level of support. At the very lowest levels of combined gross monthly income, these percentages
are reduced in the proposed schedule. In the majority of levels, the percentages of combined gross monthly income comparison increase from only one percent to five percent.

Converting the percentage of combined gross monthly incomes into monthly child support dollar obligations, there is, in most instances, an increase in the dollar amounts. For example, while the percentage increase of combined gross monthly income at the $\$ 3550$ level for one child rose from $14 \%$ to $17 \%$ or three percent after application of the discount, the change in the monthly child support obligation to be shared between the parents increases from $\$ 502$ to \$604. The dollar increases at the higher levels of combined gross monthly income are proportionately less. At the very lowest levels of monthly income of the Proposed Schedule compared with the current Schedule, there is both a decrease in percentage and in the monthly obligation dollar amounts. The proposed schedule results in an increase of monthly child support dollar obligations for almost all levels of income and number of children.

The Panel acknowledges the absence of national or Virginia-specific cost or expenditure data on raising children in single parent or non-intact families. This is why more than threefourths of the states and territories use the income shares approach and base their child support obligation calculations on data for intact families.

## Second Household Discount

Based on additional research by Dr. Rodgers, the Panel determined to mitigate what would be a very substantial increase in monthly obligation amounts, based upon his estimated costs of raising children derived from the most recent USDA Consumer Expenditure Survey data. For example, for parents with a combined gross monthly income of $\$ 3550$ with one child, a new schedule would require $24 \%$ of that combined income. The current Schedule requires $14 \%$ of the combined income. Thus, basing a new schedule on the estimated current costs would consume an additional ten percent ( $10 \%$ ) of the combined monthly income. The Panel deemed such an increase not feasible.

Dr. Rodgers provided for the Panel's consideration a number of proposed schedule options. The Panel agreed upon what is referred to as the " $70 \%$ discount" schedule option. To use the example mentioned in the previous paragraph, implementing the schedule just described would result in a ten percent ( $10 \%$ ) increase in the amount of combined monthly income devoted to child support. The " $70 \%$ discount" schedule reduces the ten percent ( $10 \%$ ) increase by $70 \%$. In this instance, the proposed new Schedule will increase the percentage of combined monthly income by only three percent (3\%). [For more details on the "discounted" schedule, see Exhibit B, Dr. Rodgers report to the Panel.]

A primary purpose of the discount is to recognize the costs of the noncustodial parent in maintaining a separate household and to his or her having visitation involving part-time custody of the child (ren). The Panel chose to follow a presumption which averages such visitation at between 60 and 90 days annually.

The resulting proposed Schedule utilizes the best available data and makes what the Panel believes are the most reasonable, feasible adjustments to provide fair treatment of both parents and their child(ren). For those cases where the obligations are established by courts rather than DCSE, the judges are also empowered to apply deviation factors to accommodate unusual circumstances or situations.

There are sometimes variables in individual child support cases that no schedule can take into account. The Code of Virginia contains a number of "deviation" factors for adjusting for these variables in particular cases. With administratively-determined child support obligations, the DCSE staffs use limited "deviation" authority; all deviations listed in the Code may be applied in court-determined obligations. Some examples of the 19 deviations in the Code include; support for other family members, the age of the child, custody arrangements, and "such other factors, including tax consequences to each party, as are necessary to consider the equities for the parents and children." [§ 20-108.1 (B) (18)]

## RECOMMENDATIONS:

#### Abstract

1. That the General Assembly approve and adopt a newly developed-for-Virginia, income shares based Schedule of Monthly Child Support Obligations and that with adoption, legislative language be included stating that the new Schedule shall be implemented prospectively, and that, for purposes of review or modification, implementation of the new Schedule shall not be considered, of itself, a material change of circumstances. At the Panel's direction, the new Schedule reflects a discount for the separate or second household. The Schedule was developed for the Panel by Dr. William Rodgers.

(The complete, recommended Schedule is attached to and is a part of this report, as Exhibit A. The Schedule includes the monthly income brackets and proposed monthly child support obligations. Which are shared proportionately between the two parents based upon their income shares. Note that Dr. Rodgers report, (see Exhibit B) provides a side by side comparison of the current monthly obligation Schedule amounts and the monthly obligation amounts of the proposed new Schedule. As this recommendation of a new Schedule was the single most controversial issue deliberated by the Panel, one member submitted a Dissenting Opinion. That document, endorsed by two other Panel members, is appended to this Report as Exhibit D.)

## 2. That § $\mathbf{2 0 - 1 0 8 . 1}$ (B) be amended to add the following:

(B)(3) In considering the imputation of income to either party pursuant to this subdivision, the court shall include in its consideration the following factors: (1) the earnings capacity, including the skills, education and training of the parties; (2) the present employment opportunities for persons possessing such earning capacity; (3) the extent to which the age, physical or mental condition or special circumstances of any child of the parties would make it appropriate that a party not seek employment outside of the home; and (4) the decisions regarding employment, career, economics, education and parenting arrangements made by the parties and their effect on present and future earning potential, including the length of time one or both of the parties have been absent from the job market.
(B)(19) Income of the parties obtained from overtime or a second job be considered for inclusion or non-inclusion based upon the history of receipt of said income, purpose of said income, and any agreement of the parties related to it.

## 3. That the following language be inserted in § 20-108.2(A) to accompany the new Schedule as an aid to understanding it:

This Schedule is based upon the rationale that there are fixed housing and utility costs, variable transportation costs, and the assumption of 'exercised' visitation by the noncustodial parent to be between 60 to 90 days annually.

## 4. That the Schedule parameters or key assumptions be inserted as the opening statements in § 20-108.2(A).

[The design of the Schedule of Basic Child Support Obligations is based on a number of key economic decisions and assumptions that are documented throughout the text of the report and the technical appendix. These Key Assumptions highlight the design assumptions that may be the most significant for application of the guidelines to individual cases.]

Key Assumptions
(1) The Guidelines are based on gross income. These guidelines are designed to provide child support as a specified proportion of an obligor's gross monthly income. The tables are in gross income for three reasons:

- Use of gross income simplifies the use of the child support guidelines because it obviates the need for a complex gross to net calculation in individual cases;
- Use of gross income can be more equitable because it avoids non-comparable deductions; and
- Use of gross income does not cause child support to be increased when an obligor acquires additional dependents, claims more exemptions, and therefore has a higher net income for a given level of gross income.
(2) Incorporated into the Schedule is a "self-support reserve" for obligors. This concept allows low-income obligors to retain enough income after payment of taxes and child support to maintain at a least a subsistence level of living (i.e., the self-support reserve.)
(3) The Schedule does not include expenditures on child care, extraordinary medical, and children's share of health insurance costs. The Schedule is based on economic data that represent estimates of total expenditures on child-rearing costs up to age 18. The major categories of expenditures include food, housing, home furnishings, utilities,
transportation, clothing, education, and recreation. Excluded from these figures are average expenditures for child care, children's extraordinary medical care, and the children's' share of health insurance. These costs are deducted from the base amounts used to establish the Schedule because they are added to child support obligations as actually incurred in individual cases. Deducting these expenditures from the base amounts avoids double-counting them in the child support calculation.
(4) The Schedule includes expenditures on ordinary medical care. Although expenditures for the children's extraordinary medical care and the children's share of health insurance are to be added to the child support obligation as actually incurred in individual cases, it is assumed that parents will make some expenditures on behalf of the children's ordinary (i.e., out-of-pocket expenses not covered by insurance) medical care. The Schedule amounts in this report are based on the assumption that expenditures on ordinary medical care are $\$ 250$ per year per child.
(5) The Schedule is based on modified versions of JLARC's Average Use in Vehicles approach for one and two children and their Per Capita approach for three children. Detailed discussion of these approaches can be found in "Technical Report: The Costs of Raising Children." Child expenditures for households with four, five, and six children are constructed by multiplying the obligations of households with three children by 1.1274, 1.2293, and 1.3142. These factors are used in the current schedule.
(6) A "separate household discount" is provided. The discount has two purposes. The first is to reserve income for an obligor to spend directly on their children during parenting time. The rationale for doing this is based on expenditures that might occur during the non-custodial parent's 60 to 90 days of visitation. The second is to provide non-custodial parents with income to cover the "fixed cost" of operating a second household. Fixed cost is defined as expenditures on shelter, household equipment and fixed transportation (net outlays on new and used cars and trucks, vehicle insurance and vehicle finance charges).
(7) Gross monthly income excludes Supplemental Security Income (SSI) and income from Temporary Assistance to Needy Families (TANF). This maintains consistency with the State's practice of excluding these components of income.

## 5. That $\S \mathbf{8 0} \mathbf{- 1 0 8 . 2}(\mathrm{C})$ be amended to add the following language addressing a selfsupport reserve.

"An obligation of child support under this title shall not reduce the NCP's residual income to an amount less than 150 percent of the federal poverty level promulgated by the U.S. Department of Health and Human Services. However, any calculation under this subdivision shall not create or reduce a support obligation to an amount which seriously impairs either party's ability to maintain minimal adequate housing for him or herself
and provide other basic necessities for the child."

## 6. That § 20-108.2 (C) be amended as follows:

For purposes of this section, "gross income" means income from all sources, and shall include, but not be limited to, income from salaries, wages, commissions, royalties, bonuses, dividends, severance pay, pensions, interest, trust income, capital gains, social security benefits except as listed below, workers' compensation benefits, veterans' benefits, spousal support rental income, gifts, prizes or obligations. Gross income shall not include income received by the payor parent from secondary employment income, whether from an additional job, from self-employment, or from overtime income not previously included in "gross income," where such income has been received in a good faith effort by the payor to discharge a child support arrearage established by a court or administrative order relating to the child or children who are subject to the proceeding and such parent is actually paying the arrearage in accordance with the terms of the order. In such event, such secondary income, or the cessation of such income upon the payment of the arrearage, shall not be the basis for material change in circumstances upon which a modification of child support may be based.

## 7. That § 20-108.2(D) be amended as follows:

"Except for good cause shown or the agreement of the parties, in addition to any other child support obligation made pursuant to this section, any child support order shall provide that the parents pay in proportion to their gross incomes, as used for the monthly support obligation, any reasonable and necessary uninsured medical or dental expenses which are in excess of the sum of $\$ 250$ for any calendar year for each child who is the subject of the obligation. For the purposes of this section, medical or dental expenses shall include but not be limited to eyeglasses, prescription medication, prosthetics, orthodontics, and mental health or developmental disabilities services, including but not limited to services provided by a social worker, psychologist, psychiatrist, counselor, or therapist." [Note: If the proposed Schedule is not adopted, the dollar amount above will need to be reduced to \$100.]

## 8. That Section $20-108.2(\mathrm{~F})$ be amended as follows:

Any child-care costs incurred on behalf of the child or children due to the employment of the custodial parent shall be added to the basic child support obligation as follows:
(1) When the monthly gross income of the custodial parent paying such costs falls below the level indicated below, 100\% of the child care costs shall be added to the basic child support obligations.

$$
\begin{array}{lll}
1 \text { child } & =\$ 1,100 & 4 \text { children }=\$ 1,900 \\
2 \text { children } & =\$ 1,500 & 5 \text { children }=\$ 2,100
\end{array}
$$

$$
3 \text { children }=\$ 1,700 \quad 6 \text { children }=\$ 2,300
$$

(2) When the monthly gross income of the custodial parent paying such costs exceeds the level set forth in subsection (F) (1) above, $75 \%$ of the child care costs shall be added to the basic child support obligation. The sum of $100 \%$ of the child-care costs exceeding the amount allowed the custodial parent as a child care tax credit shall be added to the basic child support obligation. The Court or administrative agency shall consider tax returns or any other relevant evidence presented in order to rebut the presumption of the percentage of childcare costs to be used.
(3) Child-care costs shall not exceed the amount required to provide quality care from a licensed source. When requested by the noncustodial parent, the court may require the custodial parent to present documentation to verify the costs incurred for child care under this subsection. Where appropriate, the court shall consider the willingness and availability of the noncustodial parent to provide child care personally in determining whether child-care costs are necessary or excessive.

## Non-Legislative Recommendations of the Panel

9. That the Secretary direct the Department of Social Services to produce and distribute a video recording explaining Virginia's child support Guideline, and that this recording be distributed to each court and child support office in the Commonwealth. The intent of the video is to explain Virginia's child support guideline to all parties, including the statutory deviations for the Schedule. [Note: the DCSE of the Department of Social Services has agreed to pursue this recommendation.]
10. That the Secretary encourage the Executive Secretary of the Supreme Court of Virginia to provide continuing education to courts relative to specific child support issues, including application of the child support Guideline, the various tax consequences, deviation factors, and other relevant aspects.
11. That the Department of Social Services study the feasibility of changing its automated
child support case management system, and of seeking legislation to allow for the inclusion of all deviations to insure consistency of the automated monthly guideline calculation used by the courts and the administrative agency.
12. That the remaining "issues" not addressed by this Panel, with copies of all minutes of the Panel's meetings be provided to the next Panel. Two issues remained: 1) Minimum order (\$65) for Court-ordered child support for unemployed NCP's; and 2) The means of identifying the support, e.g. food, shelter, transportation, etc.

## EXHIBITS:

A. The proposed new Schedule with cells for monthly child support for one through six children
B. Dr. William Rodgers Report to the Panel, with Appendix |[Note: The proposed new schedule from Dr. Rodgers was revised by the Panel to limit the combined gross monthly income to a maximum of $\$ 10,000$, and to retain, for incomes above that level, the current Schedule percentages.]
C. Biographical information on Dr. Rodgers
D. Dissenting Opinion by Panel Member Steinberg

The College of William and Mary
Williamsburg, Virginia

## 1. Introduction

The Commonwealth's Schedule of Child Support has not been updated since the mid-1980s. The schedule is based on a study of child-rearing expenditures published in 1984 that used the 1972-1973 Consumer Expenditure Survey. Since the schedule's creation a variety of changes have occurred that strengthen the rationale for updating the schedule. First, the Bureau of Labor Statistics' data collection process for the Consumer Expenditure Survey from which the schedule is developed has improved. The Survey's number of households, level of information and detail has grown, providing better expenditure and income data. Concepts and definitions have changed so much that Bureau of Labor Statistics officials caution users when comparing current survey data with data from earlier surveys, especially with years prior to $1984 .{ }^{1}$ It is also important to note that prior to 1984 , data from the surveys covered only the urban portion of the U.S. population.

Second, from the mid-1970s to the mid-1990s, the earnings of less-skilled and less-educated Americans failed to keep pace with inflation. During the late-1990s, earnings began to keep pace with inflation, but have not made up the ground that was lost during the previous decades. ${ }^{2}$ Over this period, incarceration rates for less-educated and

[^0]less-skilled Americans grew dramatically, having adverse impacts on their current and future earnings. ${ }^{3}$ Studies have begun to show that at the national level, the growth in incarcerations has contributed to a growth in the arrearages of less-educated and lessskilled workers. ${ }^{4}$ Although, specific data on this relationship does not exist for Virginia, nationally unpaid child support rose by 50 percent from 1997 through $2001 .{ }^{5}$

Third, today the majority of obligors are fathers who are more involved in childrearing than they were 20 years ago. ${ }^{6}$ In addition to paying or receiving child support, many obligors spend money on their children during parenting time. In the last five to ten years, Arizona, New Jersey and Missouri have each implemented adjustments for parenting time. ${ }^{7}$

Collectively, the improvements in measuring expenditures on children, the deterioration in labor market opportunities of less-skilled and less-educated Americans, and the negative impacts that incarceration have on an individual's ability to meet child support obligations provide sound rationale for updating the schedule.

Our charge from the Secretary's' Child Support Guideline Review Panel was to develop a new Child Support Guideline Schedule that incorporates the following factors

[^1]and data, 1) child-rearing costs as determined appropriate and recommended in the JLARC report entitled "Technical Report: The Costs of Raising Children" released in November 2000; 2) new economic data; and 3) changes in treatment (including addition or deletion) of factors in the existing Schedule which may be recommended by the Review Panel.

The proposed schedule has the following features. The most recent research methods and data are used to construct estimates of the expenditures of parents on their children. The schedule maintains fairness to both parents. The proposed schedule takes into account the fact that two households need resources. The schedule is more affordable for low-income parents. The schedule is easy to understand and awards are easy to calculate. Most important, the schedule is a closer representation of what parents typically spend on their children.

## 2. Why does the Commonwealth need a new child support schedule?

The current schedule is not fully consistent with recommendations for child support guidelines from the National Advisory Panel on Child Support Guidelines. In 1987, the Guideline Review Task Force recommended that 1) both parents share legal responsibility for supporting their children. The economic responsibility should be divided in proportion to available income; 2) the subsistence needs of each parent should be taken into account in setting child support, but in virtually no event should the child support obligation be set at zero; and 3) a guideline should take into account the financial support provided directly by parents [during parenting time].

The Commonwealth's current schedule which is an income shares model satisfies the panel's first recommendation. The income shares model is the most widely used
model in the United States. Over 30 states use the approach and Minnesota recently developed a proposal that would shift how they develop child support orders to an income shares model. ${ }^{8}$

The Commonwealth's schedule partially satisfies the second recommendation. The Commonwealth has a self-support reserve; however, it is at the 1987 poverty line for a single individual. ${ }^{9}$ Because of this, the current guidelines do not take into account the deterioration in the labor market outcomes of less-skilled and less-educated Americans. Holzer and Offner (2002) document a continued decline in the long-term erosion in the employment rates of young, less-educated men, especially for black men. Rodgers (2002) takes a forward looking view of the labor market opportunities of young, less-skilled men and women and concludes that their employment rates will be well below their averages during the 1990s boom. ${ }^{10}$

Further, the current guidelines are not sensitive to the dramatic decline in the inflation-adjusted earnings of low-skilled and less-educated Americans that took place from the mid-1970s to mid-1990s. The deterioration in inflation-adjusted wages was so large that even the 1990s economic boom was not able to fully recover the losses. Today, many less-educated and low-skilled men have difficulty meeting their child support obligations.

The current schedule does not satisfy the third recommendation. To my
knowledge there are no studies that provide estimates of parental expenditures that occur

[^2]during parenting time, even though it is accepted that these expenditures take place. ${ }^{11}$
During Minnesota's development of its "Shared Responsibility" schedule of support, they found that a wide "variation exists in the ways obligors spend both time and money with their children." To respond to the occurrence of these expenditures, the State's Taskforce developed a "separate household discount". The discount which was built into the schedule enables non-custodial parents to keep some of their income but reserve a portion for expenditures on their children during parenting time.

The Commonwealth's schedule is not tied to the most recent and best quality data from the Consumer Expenditure Survey. It is based on data from the Consumer Expenditure Survey prior to $1984 .{ }^{12}$ At that time, the household data was the best available; however, since then, the Bureau of Labor Statistics has made significant improvements in the quality of its data collection and added greater detail in the data that it collects.

In summary, our research attempts to create a schedule of support that addresses these deficiencies in the schedule. The schedule that we developed is grounded in the most current economic and statistical research on household expenditures on children and is consistent with the recommendations of the National Advisory Panel on Child Support Guidelines. The schedule is sensitive to the fact that all non-custodial parents need resources to operate and maintain his or her household. The schedule is also sensitive to

[^3]the adverse impact that changes in the labor market have had on lower-income obligors' ability to financially contribute to improving the welfare of their children.

We believe that implementation of the schedule presented in this report, or at a minimum a schedule that contains its features will be better for the Commonwealth's children, fairer to parents, and easy to administer. Most important, it will provide a closer representation of what parents spend on children today.

## 3. Values informing the Construction of the Proposed Schedule

The goals of Virginia's guidelines are to establish as state policy an adequate standard of support for Virginia's children, subject to the ability of parents to pay; make support obligations more equitable by ensuring more consistent treatment of persons in similar circumstances; and improve the efficiency of the court and administrative processes by providing guidance in establishing the level of child support awards. These values provide the underlying policy framework that guided us in the development of the proposed schedule.

## 4. The Process for Developing a Schedule of Child Support

Considerable debate centers around how best to estimate expenditures on children. The JLARC report "Technical Report: The Costs of Raising Children" concluded that child expenditures in husband-wife households should be used to develop the child support schedule. The following summarizes their argument.

Table 12 of the JLARC report shows that on average when there are one or two children in the household, single-parent households spend more on children than husband-wife households. For example, at $\$ 30,000$ and one child, JLARC's per capita approach to estimating monthly expenditures are $\$ 879$ in a husband-wife household,
compared to $\$ 1,018$ in a single-parent household. Their average use approach generates values of $\$ 483$ in a husband-wife household and $\$ 526$ in a single-parent household. When there are three children, expenditures in a husband-wife household are slightly more, on average. Similar patterns exist at $\$ 50,000$.

JLARC attributes the higher expenditures in single-parent households with one and two children to two sources of bias. First, the Consumer Expenditure Survey (CES) data include expenditure information on single parents (custodial parents) with children who live in the household. The data contains no information on the non-custodial parents' expenditures on those children. As a result, using the CES estimated expenditures of single-parent custodial households may understate the full expenditures on these children (p. 33, JLARC 2001).

Second, observed custodial single-parent expenditure estimates may reflect the fact that some non-custodial parents may not be making full child support payments. JLARC found that 77 percent of single-parent households in the CES did not receive any child support payments. If enough custodial parents fail to receive any or all of their child support payments to which they are entitled, then average single-parent expenditures in the CES will be biased downwards.

If corrections for these biases were made, the expenditures on children in singleparent households would be even larger than the expenditures in husband-wife households. The major implication of JLARC's finding is that even if data were available in the CES that corrected for these two biases, the levels of support would most likely be larger than if they were generated using expenditures in husband-wife households.

Finally, Virginia's income shares approach is more consistent with current labor force statistics. The 2000 Decennial Census indicates that 65.6 percent of Virginia mothers with own children under six years of age work outside the home, meaning they contribute income to their households. The comparable figure for the United States is 61.9 percent. ${ }^{13}$ The income shares approach acknowledges this empirical reality and is well suited to the variation in the distribution of income between men and women in different families. As a result, using husband-wife households in the CES to estimate expenditures on children is most appropriate.

Since one of our charges was to implement JLARC's recommendation that expenditures on children be developed using CES data from husband-wife households and that approach seems the most sensible and feasible, we use husband-wife households with one to three children in the 2000 Consumer Expenditure Survey to estimate a household's expenditures on their children. We explored using husband-wife households with four to six children, but the sample sizes were too small to generate reliable estimates.

The major expenditure categories are food, housing, clothing, transportation, education, miscellaneous expenditures, and non-extraordinary health expenditures. In Virginia, the level of support excludes extraordinary health expenditures, child care costs, and health insurance premiums for the child/ren. They are determined after the level of support based on food, housing, clothing, transportation, education, miscellaneous expenditures and non-extraordinary health expenditures is established.

[^4]Using the JLARC study "Technical Report: The Costs of Raising Children" as an initial framework, we then estimate the statistical relationship between household expenditures on children and combined gross income (e.g., for a husband-wife household with one child, we find that a 10 percent increase in gross income is associated with an average increase of 2.4 percent in expenditures on that child). Since Virginia excludes Supplemental Security Income and welfare assistance including income from the Temporary Assistance to Needy Families (TANF), we exclude these components from our measure of gross income.

To convert the statistical relationship between expenditures on children and gross income to a schedule of support, we create a "separate household discount". The discount has two purposes. The first is to reserve income for an obligor to spend directly on their children during parenting time. The rationale for doing this is based on expenditures that might occur during the non-custodial parent's 60 to 90 days of visitation. The second is to provide non-custodial parents with income to cover the "fixed cost" of operating a second household. We define "fixed cost" as expenditures on shelter, household equipment, and fixed transportation (net outlays on new and used cars and trucks, vehicle insurance and vehicle finance charges).

We also raise the self-support reserve threshold to 150 percent of the 2002 poverty line for one person. This means that if the combined gross monthly income of the parents does not exceed this threshold, then the payment schedule is not used to compute the order. A minimum award of $\$ 65$ is applied to the non-custodial parent. A minimum award is also applied to the non-custodial parent if their own income does not exceed the threshold even though the combined gross income exceeds the threshold.

We also phase in the obligations at incomes just above the self-support threshold. Doing this prevents large jumps in the schedule, which could weaken the incentive to work. It is further acknowledgement that wages among low-skilled and less-educated workers fell over much of the period since the mid to late 1970s.

## 5. Features of the Commonwealth's Current Schedule

Even though the schedule of support needs to be updated, several features of the existing schedule are retained.

- The schedule is based on expenditure and income data of husband-wife households in the Consumer Expenditure Survey.
- The schedule contains a self-support reserve.
- Husband-wife households with three children are utilized to estimate expenditures on children in households with 4,5 , and 6 children. ${ }^{14}$
- The proportion of income spent on children falls as income rises, but the dollar amount increases.

Several new features are added to the schedule of support. We estimate expenditures on children using detailed information on housing, food, clothing, and transportation in the Consumer Expenditure Survey. Although our estimates have a few modifications, they build on the JLARC study, "Technical Report: The Costs of Raising Children."

We set the self-support threshold at a gross income of $\$ 1,107.50$ per month or $\$ 13,025$ annually ( 150 percent of the poverty level for one person in February 2002). At

[^5]or below this value, the minimum order is set at $\$ 65$ a month. A self-support reserve at 150 percent of the poverty level for one person still reflects the expectation that all parents contribute financially to their children, but insures that the order will not cause the obligor to fall below poverty. Further, a self-support threshold set at 150 percent of the poverty level will make it easier for obligors who want to support their children financially, but are low-skilled and/or less educated workers and have arrears. Research has shown that low-income obligors are more likely to have arrears, thus making it harder to make "predictable and stable" payments. ${ }^{15}$

To minimize work disincentives that might occur at the self-support reserve's threshold, we slowly phase in the level of support just above the cut off. Doing this prevents a large discrete jump in the order from $\$ 65$.

Economic data and the statistical relationship between monthly expenditures on children and gross monthly income are used to generate estimates of expenditures on children in households with gross incomes that range from $\$ 1,200$ to $\$ 8,500$ per month. Due to the Consumer Expenditure Survey's focus on lower and middle income families, the Bureau of Labor Statistics cautions researchers in making statistical inferences on the expenditures of households with monthly gross incomes in excess of $\$ 8,500$. To generate estimates of the cost of children in households with incomes that exceed $\$ 8,500$ per month we apply the expenditure share at $\$ 8,500$ per month to incomes that exceed $\$ 8,500$ per month. The proposed schedule contains an easily adjustable "separate household discount". The purpose of this discount is to provide obligors with resources for

[^6]expenditures that occur on their children during parenting time and for expenditures on the "fixed cost" associated with operating a second household.

Our rationale for building a schedule with these features reflects changes in parenting, the difficulty that low-income parents have with providing "stable and predictable" payments, and the challenges associated with maintaining a second household. Our proposed schedule will help strengthen the ability of the Division of Child Support Enforcement to achieve its mission.

## 6. Estimating the Relationship between Expenditures on Children and Income

We use the micro data files of the 2000 Consumer Expenditure Survey to estimate the costs of raising children. To be included in our sample, each husband-wife household must report at least one child of their own under age 18 living in the household and report positive household income for the past year. Given these sample restrictions, we identify 5,902 husband-wife households with 1,987 reporting 1 child, 2,557 reporting two children, and 990 reporting three children. The number of husband-wife households with four children falls to 288, too few to generate reliable estimates of expenditures on children, a conclusion that JLARC also came to in its analysis. ${ }^{16}$

There are several steps to estimating a household's expenditures on children. The first involves identifying their total expenditures on food, housing, transportation, clothing, child care, and miscellaneous costs. Child care expenditures are excluded from

[^7]the list because when developing a child support order, the Commonwealth first establishes the level of support. Child care costs, health insurance premiums for the child/ren, and unreimbursed medical expenses in excess of $\$ 250$ per child per year, are treated as add-ons. Health care expenditures are excluded from the expenditure list because the Commonwealth assumes for each child an amount of $\$ 250$ per year to cover ordinary health expenditures.

Table 1 presents expenditure distributions for husband-wife households by the number of children. Our results are very similar to published Bureau of Labor Statistics from the 2000 Consumer Expenditure Survey. The table shows that housing, variable transportation, and food expenditures comprise 70 percent of total expenditures in our sample of husband-wife households. It is important to note that expenditures on housing in the Consumer Expenditure Survey are underestimated because the Bureau of Labor Statistics (BLS) treats mortgage principal payments as a part of savings rather than as expenditures. Since a large portion of an obligor's direct expenditures on his or her children is likely to be in housing costs, BLS's treatment of mortgage payments generates lower expenditures on children. This lower level of expenditures can be thought of as a discount that all homeowners receive and since higher-income obligors tend to own more expensive homes, BLS's treatment of the housing data generates a larger discount for higher-income obligors.

Second, we determine in each expense category the proportion of expenditures attributable to children. Table 2 lists the expense categories on which the Commonwealth defines support. For some categories (such as clothing), the Consumer Expenditure Survey data are reported separately for children, so that 100 percent of these expenditures
can be attributed to children. But for other categories, for which the expenditure data (such as for housing, transportation, and food) are not reported separately by family member, assumptions must be made regarding what proportion is due to children. The most common approaches that are used can be summarized as follows:

- Allocations based on averages calculated for children and adults, from federal studies (such as USDA food plans, or results from the National Medical Expenditure Survey);
- The "per capita" approach divides household expenditures by the number of family members;
- The "average use" approach bases allocations on the amount of a certain commodity (e.g. housing or transportation) that households with different numbers of children are observed to use on average, compared to households without children.

The JLARC report estimated the statistical relationship between expenditures on children that include health and child care expenditures and gross income that include Supplemental Security Income (SSI) and welfare assistance including income from Temporary Assistance to Needy Families (TANF). To generate a statistical relationship that can be converted into a schedule of child support, expenditures on children must exclude the reported health and child care expenditures, and gross monthly income must exclude SSI and income from TANF. For health care, we simulate the practice found in a number of income shares states by adding $\$ 250$ per year for each child to cover ordinary health expenses.

We now describe the methods used to attribute household expenditures to children. For estimating the proportion of food expenditures attributable to children, we use an updated version of the proportions published in the JLARC report. The proportion of food expenditures attributable to children are based on official U.S. Department of Agriculture food plans for May 2002. These proportions are shown in Table 3. The average of the four plans is multiplied by household expenditures on food. The resulting product is the estimate of food expenditures on children.

With respect to housing, we estimate expenditures for four subcategories of housing costs: shelter, utilities, household operations and household equipment, and furnishings. Housing is a perfect example of the difficulty in assigning an expenditure amount attributable to children. If JLARC's per capita proportions are used, then 33.3 percent of expenditures in a one child household are attributable to that child, compared to only 1.0 percent if JLARC's average use proportion is applied to the expenditures of a household with one child (Panel A, Table 4). This simple comparison illustrates why the per capita approach generates larger expenditures on children.

Transportation expenditures must be treated similarly to housing expenditures. Assumptions must be made on how to estimate expenditures on children. JLARC constructed two types of transportation costs: fixed vehicle and variable costs. Fixed vehicle costs capture spending on new and used cars and trucks, spending on vehicle financing, and spending on vehicle insurance. JLARC intended that this expense component capture the entry price for operating a vehicle. Their analysis concluded that the fraction of fixed vehicle costs that can be attributed to having children is 8.0 percent.

Variable transportation costs capture spending on gas and oil, licenses, other vehicles, maintenance and repairs, and public transportation. This component measures the incremental expenses of operating a car or truck. JLARC's per capita proportions shown in Panel B of Table 4 attributes 33.3 percent of transportation expenses to children in a one child household, compared to 24.0 percent if the average use proportion is used. JLARC's average use proportion comes from their analysis of the National Personal Transportation Survey (NPTS) which contains information about a household's number of vehicles and estimates of the number of miles driven. Panel B of Table 4 shows that the average use proportion starts at 24.0 percent for husband-wife households with 1 child, jumps to 44.0 percent in households with 2 children, and falls to 38.0 percent for households with 3 children. All proportions are well below the per capita proportions. Clothing expenditures are divided into clothes and footwear and other apparel products and services (such as dry cleaning, repairs, and alterations). Clothes expenditures are reported for infants up to age 16 in the Consumer Expenditure Survey. Thus, 100 percent of these expenditures are attributed to children. However, expenditures for 16 and 17 year olds are not separately reported from expenditures for adult men and women in the household. We identified households with children 16 and 17 years of age and pro-rated the clothing expenditures for men and women age 16 and older on a per capita basis. Footwear and other apparel products and services are not reported separately for children. Proportions based on the per capita approach are used for this expense category.

Education expenditures are fully identifiable for children in the Consumer Expenditure Survey. Miscellaneous items cover entertainment, personal care items,
reading materials, and other items. The latter category includes a sub category of expenditures on pets, toys and playground equipment. JLARC removed all of the expenses on these items from the miscellaneous total and assumed that 100 percent were spent on children, while the per capita approach is applied to the remaining expense categories.

For descriptive purposes, Tables 5 and 6 show average quarterly expenditures on children by expense category. The housing and transportation summary statistics further illustrate the variation in expenditures that the approaches create. Child care expenditures are low because they include households with children older than five years of age, which may not have work related child care costs or the costs are very small.

## 7. The Preferred Approach for Estimating the Costs of Children

Our preferred approach for estimating the costs of children in husband-wife households with one and two children is the following. Food expenditures are allocated based on averages calculated for children and adults from the USDA food plans (Official USDA Food Plans: Cost of Food at Home at Four Levels, U.S. Average, May 2002). The "Average Use" proportions shown in Table 4 are applied to generating fixed transportation expenditures (Cars and trucks, new and used (net outlay), Vehicle Insurance, Vehicle Finance charges). The per capita proportions in Table 4 are applied to variable transportation (Gasoline and motor oil, Maintenance and repairs, Vehicle rental, leases, licenses, and other charges, Public Transportation) expenditures and housing (Shelter, Utilities, Equipment and furnishings, Operations). Footwear and other apparel products and services, entertainment, personal care items, reading materials, and other miscellaneous items expenditures on children are based on a per capita approach.

Expenditures on clothing (per capita for children 16 and 17 years of age), pets, toys and playground equipment, and education are assumed to be solely on children.

Our preferred method for estimating expenditures on children in husband-wife households with three children is the per capita approach. The per capita proportions developed by JLARC are applied to our housing and transportation expenditures. The proportions are shown in Table 4. To compute estimated costs for households with four, five, and six children we multiplied the obligations of households with three children by 1.1274, 1.2293, and 1.3142 .

## 8. Identifying the Relationship between Expenditures and Gross Income

To identify the relationship between expenditures on children and household income, we regress the logarithm of average monthly expenditures on children on the logarithm of average monthly gross income. Table 7 lists the components of gross monthly income. As a reminder we exclude Supplemental Security Income (SSI) and welfare assistance including income from Temporary Assistance to Needy Families (TANF) since the Commonwealth's current practice is to exclude them from gross income. To convert expenditures from a quarterly to a monthly rate, we divide by three and to convert annual income into a monthly rate we divide by twelve.

To predict expenditures on children at a particular level of income we evaluate the regression model at that level of income and then take the exponential of the value. For example, the estimated average use model for a husband-wife household with one child is 1) $\ln \left(\right.$ Expenditures $\left._{i}\right)=4.839+0.235 \ln \left(\right.$ Income $\left._{i}\right)$.

The estimate of 0.235 is interpreted as follows. A 10 percent increase in gross income is associated with an approximate 2.35 percent increase in expenditures on the
child. Table 8 presents regression estimates for the per capita and average use vehicles approaches for each husband-wife household with one, two, and three children. To predict a household's level of child expenditures at a given income, such as $\$ 5,000$, we take the natural logarithm of $\$ 5,000$ and obtain a value of 8.52 . We then multiply 8.52 by 0.235 , yielding a product of 2.001 . The sum of 2.001 and 4.839 is calculated. The value of 6.84 has the interpretation of being the predicted logarithm of monthly expenditures for a household with gross income of $\$ 5,000$. To convert the value into dollars we apply the inverse of the natural logarithm. When done to 6.84 , a value of $\$ 934.49$ is obtained. Thus a household with one child and $\$ 5,000$ in gross monthly income is predicted to spend just under $\$ 1000$ dollars on the child. In $\$ 50$ increments, we apply this data transformation to incomes that range from $\$ 1,200$ to $\$ 8,500$ per month.

Table 9 contains these expenditure outcomes or estimates of the costs of raising children. The average use in vehicles approach is used for one and two children and the per capita approach is used for three children. Table 9 also includes a self-support reserve of $\$ 1107.50$ per month, which is equivalent to 150 percent of the February 2002 poverty guidelines. Below that minimum, the economic data is not used to estimate the relationship between expenditures on children and income. The bold entries incorporate an adjustment. At gross incomes just above the self-support reserve the estimate from the economic data is compared to a series of phased in costs. The process is as follows. If gross income exceeds 150 percent of the poverty level by $\$ 65$ or more, then compute the difference between gross income and the self-support reserve. Multiply the difference by 0.90 if the household has one child, 0.91 for two children, and 0.92 for three, four, five, and six children. Compare this obligation to the obligation that the estimated coefficients
in Table 8 would predict. The lower amount is used as the estimated costs. These are the bold figures in Table 9.

In each column of Table 9, the costs listed after the bold entries are constructed from the regression models shown in Table 8. Estimates of expenditures on children in households with one and two children are based on the Average Use in Vehicles approach, while estimates for households with three or more children are based on the per capita approach. When compared to the Commonwealth's current schedules, the "Average Use in Vehicles" model does the best job at all levels of gross income in describing expenditures on children in households with one and two children. When compared to the state's current schedule, the per capita approach does the best job at all levels of income in describing expenditures in households with three children.

To compute estimated costs for households with four, five, and six children we multiplied the obligations of households with three children by 1.1274, 1.2293, and 1.3142. These factors are used in the current schedule.

## 9. Creating a Schedule of Support

The key step needed to convert our estimates of child expenditures into a schedule of child support payments is the creation of a "separate household discount". The discount which lowers the values in Table 9 was created to reserve income for obligors to spend directly on their children during parenting time and for the "fixed costs" associated with operating a second household. The approach also helps to smooth the expenditure estimates in Table 9 by lessening the size of jumps in support that might induce reductions in hours worked or the shielding of income.

The proposed schedule contains discounts of 70 percent at $\$ 3,550, \$ 4,550$, and $\$ 8,500$. The schedule is developed as follows. For households with one child, compute the shares of expenditures in children under the current schedule and in the estimated costs of children at 1) the median household income of $\$ 4550,2) \$ 1,000$ below median income, and 3) $\$ 8,500$, the maximum income in which reliable estimates of expenditures on children can be obtained from a regression model.

For example, a household with one child that reports $\$ 4,550$ in gross monthly income, the current schedule sets the order at 14 percent of combined gross monthly income, compared to a CES estimate of 20 percent. In essence by setting the proportion at 15.8 percent, a discount of 4.2 percentage points is offered, creating an income reserve that can be spent directly on children during parenting time and the operation of a second household.

Table 10 presents the current, actual, and proposed shares at $\$ 3,550, \$ 4,550$ and $\$ 8,500$. Starting at the actual shares, the proposed shares are seven-tenths of the distance between the actual and current share.

The following describes how the proportions are connected across the income scale to create our proposed schedule of support shown in Table 11. Starting at \$3,550 and moving down to $\$ 1,200$ in $\$ 50$ increments, the proportions were adjusted upward for each income level and additional child by very small increments:

1) The discounted percentage for a family with one child was increased by .05 percentage points for each $\$ 50$ decrease in income.
2) The discounted percentage for a family with two children was increased by .10 percentage points for each $\$ 50$ decrease in income.
3) The discounted percentage for a family with three children was increased by . 12 percentage points for each $\$ 50$ decrease in income.

One problem with the "phase in" approach shown in Table 9 is that large increases in the order occur from $\$ 1,200$ to $\$ 1,400$. To address the potential work disincentive problem that this generates, we constructed the following phase in. We start with the levels of support at $\$ 1,200$. While moving up the schedule in $\$ 50$ increments, we increase support levels by no more than $\$ 30$ until they equal the levels of support predicted by the regression model. A similar smoothing approach appears to have been used in the current schedule. More specifically, at a combined gross monthly income of \$1,200:

1) For one child, we start at $\$ 83$ and move up the schedule in $\$ 50$ increments. We increase support levels by $\$ 28$ for the first 7 increments and $\$ 14$ for the next 8 increments.
2) For two children, we start at $\$ 84$ and move up the schedule in $\$ 50$ increments. We increase support levels by $\$ 29$ for the first 19 increments and $\$ 14$ for the next 7 increments.
3) For three children, we start at $\$ 85$ and move up the schedule in $\$ 50$ increments. We increase support levels by $\$ 29$ for the first 30 increments and $\$ 20$ for the next 5 increments.
4) For four, five and six children, multiply the obligations of households with three children by $1.1274,1.2293$ and 1.3142 . These factors are used in the current schedule.

The intuition behind this approach is to provide larger discounts for lower income obligors and for obligors with more children, but the approach maintains the inverse relationship between the size of household income and the proportion of household income spent on children. In other words, it reflects the statistical reality that families with less money spend a larger percentage of their income on their children, but it acknowledges that separated families cannot afford to spend as much on their children as they would spend if they lived together.

The proportions from the median household income (approximately $\$ 4,550$ ) to $\$ 8,500$ were reduced as follows:

1) For one child the proposed proportion falls by 4.2 percentage points from 15.8 percent at the median $(\$ 4,550)$ to 11.6 percent at $\$ 8,500$. Over this range there are 79 increments of $\$ 50$. To generate a smooth transition across this range, we equally divide the 4.2 percentage points across these 79 increments.
2) For two children the proposed proportion falls by 6.1 percentage points from 23.4 percent at the median $(\$ 4,550)$ to 17.3 percent at $\$ 8,500$. Over this range there are 79 increments of $\$ 50$. To generate a smooth transition across this range, we equally divide the 6.1 percentage points across these 79 increments.
3) For three children the proposed proportion falls by 7.3 percentage points from 29.3 percent at the median $(\$ 4,550)$ to 22.0 percent at $\$ 8,500$. Over this range there are 79 increments of $\$ 50$. To generate a smooth transition across this range, we equally divide the 7.3 percentage points across these 79 increments.

The discount proportions at $\$ 8,500$ to $\$ 15,000$ were reduced as follows:

1) For one child the proposed proportion falls by 2.1 percentage points from 11.6 to 9.5 percent. Over this range there are 130 increments of $\$ 50$. To generate a smooth transition across this range, we equally divide the 2.1 percentage points across these 130 increments.
2) For two children the proposed proportion falls by 3.5 percentage points from 17.3 percent to 13.8 percent. Over this range there are 130 increments of $\$ 50$. To generate a smooth transition across this range, we equally divide the 3.5 percentage points across these 130 increments.
3) For three children the proposed proportion falls by 4.9 percentage points from 22.0 percent to 17.1 percent. Over this range there are 130 increments of $\$ 50$. To generate a smooth transition across this range, we equally divide the 4.9 percentage points across these 130 increments.

The discount proportions for different-sized families with gross monthly incomes of $\$ 4,050$, the mid-point between $\$ 3,550$ and $\$ 4,550$ were calculated by averaging the discounted percentages for similar-sized families. Doing this provides a smooth transition for incomes between these two endpoints.

Table 12 compares the current and proposed schedules by showing the shares of combined gross monthly income for each schedule. For one child at incomes below $\$ 1,600$, the order in the proposed schedule is less than the order in the current schedule. From $\$ 1,600$ to $\$ 3,550$, the proposed schedule's orders range from nearly equal to 3 percentage points above the current schedule's orders. From $\$ 3,550$ to $\$ 4,550$, the difference falls to 2 to 3 percentage points. At gross incomes above $\$ 4,550$, the proposed schedule's orders are 1 to 2 percentage points higher than current amounts.

The proposed and current schedules for two children exhibit a similar pattern. At combined gross income below $\$ 1,950$, the current schedule order exceeds the proposed order. From $\$ 1,950$ to $\$ 3,550$, the proposed schedule's order exceeds the current order by 1 to 5 percentage points and 2 to 4 percentage points from $\$ 3,550$ to $\$ 4,550$. At combined gross incomes in excess of $\$ 4,550$, the proposed schedule's orders are higher than the current's orders by 1 to 2 percentage points.

Tables 13 and 14 show that for three to six children in households with income less than $\$ 2,300$, proposed orders are less than current orders. From these values up to $\$ 3,550$, the proposed orders of support range from nearly equal to 8 percentage points above current orders. From $\$ 3,550$ to $\$ 4,550$ (the median income), the proposed shares are 3 to 7 percentage points above current orders. Proposed orders above $\$ 4,550$ range from being 0 to 4 percentage points higher than the current orders.

## 10. Summary and Conclusions

The schedule developed and recommended is tied to statistical estimates of what families spend on children. They reflect both parents' ability to pay and are informed by extensive research. The schedule retains many features of the Commonwealth's current child support schedule while addressing several key concerns of parents and practitioners. Finally, the schedule is consistent with the recommendations of the Panel.

## Table 7: Components of Before Tax Income Used in Analysis

Income before taxes in past 12 months (less Supplemental Security Income (SSI) and welfare assistance including income from the Temporary Assistance to Needy Families (TANF)) =

Wage and salary income before deductions
Income or loss from nonfarm business, partnership or professional practice
Amount of income or loss from own farm
Social Security and Railroad Retirement income prior to deductions for medical insurance and Medicare

Unemployment compensation
Workers' compensation or veterans' benefits (including education benefits, but excluding military retirement)

Income from interest on savings accounts or bonds
Regular income from dividends, royalties, estates, or trusts
Income from pensions or annuities from private companies, military, Government, IRA, or Keogh

Net income or loss was received from roomers or boarders
Net income or loss was received from payments from other rental units
Child support payments in other than a lump sum amount
Regular contributions from alimony and other sources
Other money income including money received from cash scholarships and fellowships, stipends not based on working, or from the care of foster children

Value of Food Stamps

## Less

Supplemental Security Income from all sources received
Public assistance or welfare including money received from job training grants

Table 8: Coefficient Estimates of Expenditures on Children (Standard Errors in Parentheses)

|  |  | Per Capita | Average Use in Vehicles |  |
| :--- | :---: | :---: | :---: | :---: |
| Number of Children | Constant | Log(Average Monthly Income) | Constant | Log(Average Monthly Income) |
| 1 | 4.902 | 0.237 | 4.839 | 0.235 |
|  | $(0.107)$ | $(0.013)$ | $(0.113)$ | $(0.014)$ |
| 2 | 5.786 | 0.179 | 5.679 | 0.180 |
|  | $(0.080)$ | $(0.010)$ | $(0.085)$ | $(0.010)$ |
| 3 | 5.921 | 0.180 | 5.852 | 0.176 |
|  | $(0.122)$ | $(0.015)$ | $(0.127)$ | $(0.015)$ |

Notes: The estimates are based on husband-wife households from the 2000 Consumer Expenditure Survey micro data. To be included in the sample, they were required to have reported having at least one child of their own under age 18 living in the household and some positive amount of household income for the past year. This yielded 5,902 households, with 1,987 having one child, 2,557 having two children, and 990 having three children. The samples of households with 4,5 and 6 children are too small to generate reliable results. For example there are only 288 husband-wife households with four children.

Table 9: Estimated Expenditures on Children in Husband-Wife Households

| Gross Monthly Income | One Child | Two Children | Three Children | Four Children | Five Children | Six Children |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1200 | 83 | 84 | 85 | 96 | 104 | 112 |

Notes: For combined gross monthly income that exceeds $\$ 15,000$, add the amount of child support for $\$ 15,000$ to the
following percentages of combined gross monthly above $\$ 15,000$ : one child: $3.1 \%$; two children: $4.7 \%$; three children: $6.0 \%$;
four children: $6.8 \%$; five children: $7.4 \%$; six children: $7.9 \%$.

## APPENDIX SUMMARY OF KEY ASSUMPTIONS

The design of the Schedule of Basic Child Support Obligations is based on a number of key economic decisions and assumptions that are documented throughout the text of the report and the technical appendix. This Appendix highlights the design assumptions that may be the most significant for application of the guidelines to individual cases.
(1) The Guidelines are based on gross income. These guidelines are designed to provide child support as a specified proportion of an obligor's gross monthly income. The tables are in gross income for three reasons:

- Use of gross income simplifies the use of the child support guidelines because it obviates the need for a complex gross to net calculation in individual cases;
- Use of gross income can be more equitable because it avoids non-comparable deductions; and
- Use of gross income does not cause child support to be increased when an obligor acquires additional dependents, claims more exemptions, and therefore has a higher net income for a given level of gross income.
(2) Incorporated into the Schedule is a "self-support reserve" for obligors. This concept allows low-income obligors to retain enough income after payment of taxes and child support to maintain at a least a subsistence level of living (i.e., the self-support reserve.)
(3) The Schedule does not include expenditures on child care, extraordinary medical, and children's share of health insurance costs. The Schedule is based on economic data that represent estimates of total expenditures on child-rearing costs up to age 18. The major categories of expenditures include food, housing, home furnishings, utilities, transportation, clothing, education, and recreation. Excluded from these figures are average expenditures for child care, childrens' extraordinary medical care, and the children's' share of health insurance. These costs are deducted from the base amounts used to establish the Schedule because they are added to child support obligations as actually incurred in individual cases. Deducting these expenditures from the base amounts avoids double-counting them in the child support calculation.
(4) The Schedule includes expenditures on ordinary medical care. Although expenditures for the children's extraordinary medical care and the chidlren's share of health insurance are to be added to the child support obligation as actually incurred in individual cases, it is assumed that parents will make some expenditures on behalf of the children's ordinary (i.e., out-of-pocket expenses not covered by insurance) medical care. The Schedule amounts in this report are based on the assumption that expenditures on ordinary medical care are $\$ 250$ per year per child.
(5) The Schedule is based on modified versions of JLARC's Average Use in Vehicles approach for one and two children and their Per Capita approach for three children. Detailed discussion of these approaches can be found in "Technical Report: The Costs of Raising Children." Child expenditures for households with four, five, and six children are constructed by multiplying the
obligations of households with three children by 1.1274, 1.2293, and 1.3142. These factors are used in the current schedule.
(6) A "separate household discount" is provided. The discount has two purposes. The first is to reserve income for an obligor to spend directly on their children during parenting time. The rationale for doing this is based on expenditures that might occur during the non-custodial parent's 60 to 90 days of visitation. The second is to provide non-custodial parents with income to cover the "fixed cost" of operating a second household. Fixed cost is defined as expenditures on shelter, household equipment and fixed transportation (net outlays on new and used cars and trucks, vehicle insurance and vehicle finance charges).
(7) Gross monthly income excludes Supplemental Security Income (SSI) and income from Temporary Assistance to Needy Families (TANF). This maintains consistency with the State's practice of excluding these components of income.

## EXHIBIT C

## William McKinley Rodgers III

Biographical Sketch

William Rodgers is the Frances L. and Edwin L. Cummings Associate Professor of Economics at the College of William and Mary and a member of the Wilkins Forum at the University of Minnesota's Humphrey Institute. His research focuses on general issues in labor economics and the economics of social problems. His work examines a variety of topics including the relationship between racial earnings gaps and market-wide earnings inequality; gender inequality; the economics of education; affirmative action; and the evaluation of the impact of labor market policies. He is the author of numerous articles in scholarly journals and edited volumes on these topics.

Rodgers' recent research explores the impact that the 1990's economic expansion has had on the earnings and employment of Americans. Currently, he is examining the impact that increases in the federal minimum wage have on the food security of American families.

Professor Rodgers has been an Associate Editor for the Southern Economic Journal for two years and co-edited the book Prosperity for All: The Economic Boom and African Americans (Russell Sage Foundation, 2000). He served as the Chief Economist of the U.S. Department of Labor from January 2000 to January 2001. He is the director of the newly created Center for the Study of Equality at the College of William and Mary. Rodgers also serves on the Governor's Advisory Board of Economists.

His policy work includes testifying before the Joint Economic Committee, U.S. Congress, the Joint Sub-committee Studying the Status and Needs of African American Males in Virginia and serving as a consultant for the National Urban League, the Joint Center for Economic and Political Studies and AFL-CIO.

Professor Rodgers chairs William and Mary's Committee on Employee Opportunity, whose charge is to study and make recommendations on how to improve the paths of personal advancement and professional growth of the College's classified, part-time and contract work force.

Professor Rodgers graduated from Dartmouth College in 1986 and earned M.A.'s from the University of California at Santa Barbara and Harvard University. He earned his Ph.D. in Economics from Harvard University in 1993. He is a past member of both the WilliamsburgJames City County School Board and a Trustee for the New Horizons Regional Vocational Education Center. Currently, Professor Rodgers is President-Elect of the National Economic Association, co-chair of the Planning Committee of the United Way of Greater Williamsburg and a member of the American Economic Association's Committee on the Status of Minorities in the Economics Profession.

He is married to Yana Rodgers, Associate Professor of Economics at William and Mary. They have three young children.

Child Support Guideline Review Panel<br>Joe Crane, Chairman<br>730 East Broad Street<br>4th Floor<br>Richmond, VA 23219

## Dissenting Opinion of Murray Steinberg

The record will show that I voted on the prevailing side for most recommendations of this panel. The facts presented to this panel simply do not support adopting the new Schedule of Monthly Child Support Obligations, as presented by Dr. William Rodgers. Accordingly, I strongly object to its recommendation for three reasons.

1. The overwhelming majority of testimony the Panel received from the public was that child support, obligations were unjust and too high. As one person put it, child support awards "grossly exceed actual child expenses...." Another asked, "How am I suppose to care for my children... if I have to live in near poverty." The number one complaint stated over and over was that noncustodial parents receive no tax benefits. Others complained that special one time "environmental pay," second jobs or unpredictable, nonrecurring overtime pay was unjustly included their "gross income." Neither of these issues was adequately addressed by the Panel.

Only one person stated "The guidelines do not adequately provide for the housing costs, child care costs, health related costs or education costs of rearing children." One other person wrote that the child support his girl friend was to receive was "woefully inadequate." Many forget that our child support guidelines determine each parent's obligation, and that the father's obligation alone is not suppose to be adequate. Both parents have an equal obligation to support their child. If custodial parents felt the awards were inadequate, they surely did not make that clear to the panel.
2. Before the Panel could evaluate our child support guidelines, we needed the to answer two basic, fundamental questions: 1) the definition of "child support" and 2) the parameters of the schedule. No definition of "child support" was accepted by the panel majority. Some of the parameters were found in Policy Studies Inc.'s "Updated Child Support Schedule, State of Virginia, April 6, 1999, "Summary of Key Assumptions," but no definition was found.

Minutes of the Panel's July 1, 2002 meeting state "Senator Quayle moved the Panel maintain the current definition of "child support" being used." The majority approved his motion. However, from my research, I have determined that not only is there no "current definition" of "child support" in Virginia statutes or case law, but also there is none in any Federal laws, acts, or regulations.
3. Statements of facts presented by Dr. Rodgers sounded more like reasons to decrease our present schedule. The following is a summary of statements made by Dr. Rodgers:

- There is no "current research and data on the cost of and expenditures necessary for rearing children" in separate households. [Va. Code § 20-108.2 (H)]
- "Studies have begun to show that at the national level, the growth in incarcerations has contributed to growth in arrearages of less-educated and less-skilled workers... Over this period (Mid-1970s to mid-1990s), incarceration rates for less-educated and lessskilled Americans grew dramatically, having adverse impacts on their current and future earnings."
- "... today the majority of obligors are fathers who are more involved in child-rearing than they were 20 years ago. In addition to paying or receiving child support, many obligors spend money on their children during parenting time... in addition to the child support they pay."
- "... from the mid-1970s to the mid-1990s, the earnings of less-skilled and lesseducated Americans failed to keep pace with inflation."
- "... the deterioration in labor market opportunities of less-skilled and less educated Americans and the negative impacts that incarceration have on an individual's ability to meet child support obligations provide a sound rationale for updating the schedule."

## The following facts seem to defy logic.

In developing new schedules, Dr. Rodgers said he assumed the same standard of living would be maintained after separation of the intact household, even though he agreed that this assumption is mathematically impossible. Dr. Rodgers stated that a smaller percentage of the parents combined gross income will be used to support the children if parents are living separately. A larger percentage will be needed to cover fixed expenses like housing.

Dr. Rodgers stated "The fact that they (food and beverages, housing, and transportation which comprise approximately 67 percent of expenditures) increased over either period provides rationale for updating the schedule." Although he correctly stated that the "income of less-skilled and less-educated Americans failed to keep pace with inflation," he neglected to state that overall American's incomes not only have kept up with the cost of necessities, but actually have risen faster.*

Under our present schedule the child support obligation goes up as income rises. There is in effect a self regulating adjustment now. For example as combined income increases from $\$ 2,000$ to $\$ 3,000$ child support increases by $32 \%$. As income increases from $\$ 3,000$ to $\$ 6,000$ child support increases by $71 \%$.

* The Bureau of Labor Statistics chronicles a steady rise in the inflation-adjusted wages of the average American worker in its recent report on the subject. [See Bureau of Labor Statistics, "Employment Cost Index, Constant Dollar, June 1989" (July 25, 2002).] On Page 3 of that report is a table showing that after inflation, workers' wages have risen slowly but steadily from 1981 through 2002. [Table 2a, Employment Cost Index (Compensation), Civilian Workers]
That includes the period spanned by the current child support guidelines, beginning in 1989, since wages are 9.9 percent higher after inflation than they were in 1989. (The table calculates all wages as a percentage of their 1989 level; the index was 109.9 in March 2002 and 110.3 in June 2002, according to Table 2a. So there was a 9.9 percent rise by March 2002 and 10.3 percent rise by June 2002). Ref: http://www.bls.gov/web/ecconst.pdf.

The proposed schedule raises child support roughly $17 \%$ at the lower and higher income levels and $8 \%$ in the middle income levels. If a person at the $\$ 3,000$ combined income level gets a $\$ 100$ a month raise, he could wind up paying $24 \%$ more child support using the new schedule.

Dr. Rogers stated that no visitation was built into his schedule because his schedule is based upon estimates of raising children in an intact family. It should be noted that the Panel voted to include "the assumption of 'exercised' visitation by the noncustodial parent to be between 60 to 90 days annually" at the final meeting held October 8, 2002. Not until his final report to the Panel, dated October 31, 2002, did Dr. Rodgers state, "The rationale for doing this (separate household discount) is based on expenditures that might occur during the noncustodial parent's 60 to 90 days of visitation...."

Dr. Rodgers states, "The proposed schedule contains an average discount of $64 \%$, with discounts of 70 percent at $\$ 3,550, \$ 4,500$, and $\$ 8500$." There does not appear to be a clear or consistent discount which can be identified at any income level. What is discounted? Originally Dr. Rodgers gave the Panel five options, stating that if we wanted different ones to just let him know. The adjustments called "Separate Household Discount" seem to be arbitrary and capricious.

As with the present schedule, no one can identify the components in any of the proposed schedule. How much is included for housing, food, clothing, education, or routine medical expenses? What is the percentage of fixed cost? If the noncustodial parent does not exercise 60 to 90 days of visitation, how much should be added to his/her child support obligation? No one knows! Judges will have a hard time knowing how much to adjust without at least knowing the breakdown of fixed and variable costs. Of course, it would be impossible for D.C.S.E. staff to make any adjustments.

FINALLY, there will be fiscal impact if this new schedule is enacted into law. The average increase is $17 \%$ in the lower and upper income levels and $8 \%$ in the middle income levels. The Division of Child Support Enforcement currently handles over 300,000 cases. Each person is entitled to a review every three years. I cannot imagine anyone who would turn down a review yielding them an increase in child support.

Even if the General Assembly adopts the new schedule and adds a clause which states "the new Schedule shall not be considered, of itself, a material change of circumstances," judges and D.C.S.E. staff will have to first calculate child support using the old schedule to determine if there is a material change of circumstances to warrant a modification. Some custodial parents will be encouraged or tempted to ask for a modification even if they have no other material change of circumstances.

Furthermore, there will be a greater number of noncustodial parents who will not be able to pay the increased amount, resulting in a greater number of show cause hearings and an increased number of people being incarcerated. There will be fiscal impact!

UNTIL there can be a schedule with identifiable components, based upon current data on the actual cost of raising a child or children in separate households, I believe it would be reckless and irresponsible to recommend that the General Assembly adopt another schedule.

For all these reasons, I respectfully dissent and ask that the General Assembly reject the recommendation of the Panel majority for a new schedule at this time.

Concurring with this Dissenting Opinion are members Cynthia Ewing and Maxie Cannon

[^0]:    ${ }^{1}$ See FAQ \#11 at http://www.bls.gov/cex/csxfaqs.htm\#q15.
    ${ }^{2}$ For example, the real value of the U.S. Federal minimum wage has fallen by 13 percent since it was last increased in 1997. Further, inflation-adjusted (2001 dollars) average hourly earnings fell from $\$ 15.45$ in 1978 to $\$ 14.80$ in 1984. They fell further to $\$ 13.28$ in 1994. Since then they have risen to $\$ 14.31$, but still well below its peak in 1978. Much of the stagnation and decline is due to earnings not keeping up among less-educated workers. For example, the median annual earnings of men with 4 years of high school fell from $\$ 33,204$ in 1984 to $\$ 32,245$ in 1990. Over this period, the median annual earnings of men with 4 years of college jumped from $\$ 56,320$ to $\$ 61,674$. In 1991, the Bureau of Labor Statistics changed its educational attainment question. Thus, data since then are not directly comparable to data prior to 1990. However, the pattern of a growing gap between college and high school educated men continued during the 1990s. The median real annual earnings of male high school graduates increased from $\$ 28,495$ in 1991 to $\$ 30,659$ in 2001. Figures for males with at least a college degree increased from $\$ 50,143$ to $\$ 55,230$ over the same period. All figures are in 2001 dollars (http://www.census.gov/hhes/income/histinc/incperdet.html).

[^7]:    ${ }^{16}$ Data collection is carried out by the Bureau of the Census under contract with BLS. In the Interview Survey, each consumer unit is interviewed every 3 months over five calendar quarters. In the initial interview, information is collected on demographic and family characteristics and on the inventory of major durable goods of the consumer unit. Expenditure information is also collected in this interview, but is used only to prevent duplicate reporting in subsequent interviews. Expenditure information is collected in the second through the fifth interviews using uniform questionnaires. Income and employment information is collected in the second and fifth interviews. In the fifth interview, a supplement is used to account for changes in assets and liabilities.
